CLAIMS

- 1. A method for producing a granular composition comprising calcium and phosphorus, in which a calcium compound is granulated while adding a granulation liquid, c h a r a c t e r i s e d in that the granulation liquid comprises sulphuric acid.
- 2. A method as claimed in claim 1, wherein the sul-10 phuric acid is added in such an amount that the final product comprises 1-9% by weight sulphur.
 - 3. A method as claimed in claim 1 or 2, wherein the granulation liquid comprises 25-95% by weight sulphuric acid.
- 4. A method as claimed in any one of claims 1-3, wherein the sulphuric acid is added in such an amount that the final product has a buffer capacity of less than 700 mekv H^+/kg .
- 5. A method as claimed in any one of claims 1-4,
 wherein the calcium compound comprises a calcium phosphate.
 - 6. A method as claimed in claim 5, wherein the calcium phosphate comprises dicalcium phosphate.
 - 7. A method as claimed in any one of claims 1-6, wherein the calcium compound comprises limestone.
 - 8. A method as claimed in any one of the preceding claims, wherein the granulation liquid further comprises phosphoric acid.
- 9. A method as claimed in any one of the preceding claims, wherein the sulphuric acid and optionally water and/or optionally phosphoric acid are mixed to a granulation liquid, and that the granulation liquid is then added to the calcium compound in a granulating device.
- 10. A method as claimed in any one of the preceding claims, wherein the sulphuric acid and optionally water and/or optionally phosphoric acid are added to the calcium compound each separately in a granulating device.

- 11. A composition which comprises calcium and phosphorus and which is produced by granulation of a calcium compound, characterised in that the granulation has been made by means of a granulation liquid comprising sulphuric acid.
 - 12. Use of sulphuric acid in production of a granulate comprising calcium and phosphorus.
